Hiring Manager
MongoDB, Inc.

Subject: Application for Data Engineering Intern – Summer 2027

Dear Hiring Manager,

I am writing to apply for the Data Engineering Intern position at MongoDB. I am currently pursuing a Bachelor of Technology in Artificial Intelligence and Data Science, with an expected graduation in Spring 2027, and I am keen to gain hands-on engineering experience in a company building large-scale, modern data platforms.

MongoDB's mission to empower innovators through software and data strongly aligns with my interests. I am particularly drawn to MongoDB Atlas and its globally distributed, multi-cloud architecture, as well as the opportunity to contribute to teams working on reliable data pipelines and scalable data platforms that support AI-driven applications.

I have a solid foundation in computer science concepts, including data structures, algorithms, and software design. I am proficient in Python and JavaScript, with experience applying them in data analysis, backend development, and automation projects. Through internships and academic work, I have worked with large datasets, performed exploratory data analysis, and focused on writing clean, maintainable code. I have also completed certifications in MongoDB, data analytics, machine learning, and cloud technologies, strengthening my understanding of modern data systems.

I enjoy collaborating with cross-functional teams and continuously improving my technical skills through mentorship and feedback. MongoDB's emphasis on impactful work, learning, and inclusive culture makes it an environment where I believe I can contribute meaningfully while growing as a data engineer.

Thank you for your time and consideration. I would welcome the opportunity to further discuss how my skills and interests align with MongoDB's Data Engineering teams.

Sincerely,

J.Berlin Immanuel Santhosh
