Berlin Immanuel Santhosh

Pre-Final Year B.Tech Student in AI & Data Science | Aspiring AIML Engineer | Strong Interest in Machine Learning, Model Development, Data Analysis, and Applied AI

Chennai, Tamil Nadu, India

Summary

I'm a pre-final year B.Tech student specializing in Artificial Intelligence and Data Science, with a strong focus on building practical, end-to-end solutions rather than just talking about them. I've worked on projects ranging from data analysis and visualization to AI-powered applications, including HALO, a learning organizer chatbot that generates study plans, notes, and answers across multiple languages from a single prompt. I'm particularly interested in how AI can simplify complex workflows and save real time for real users.

My technical interests include Python, JavaScript, data analysis, machine learning, and system-level concepts like scheduling and memory management. I've completed hands-on internships and certifications with organizations such as Tata, IBM (Forage), Google Cloud, AWS, MongoDB, and Alison, gaining experience in data mining, visualization, and applied analytics.

I enjoy working on challenging problems, learning deeply rather than superficially, and building projects that actually work outside a demo. I'm currently looking to grow through internships, projects, and collaborations in AI, data science, and software development.
